

That “cotton candy stuff”...

Day 1

Day 3

Day 7

Day 10

The Owner:

Nancy Hamad, Texas

The Patient:

Bauer

The Wound:

Bauer presented with a chronic wound on his left rear hock.

The Treatment:

Initially, a variety of attempts were made to heal the wound to Bauer's hock, including negative pressure therapy. After 8 months, Bauer's owner was reviewing alternative wound therapy treatments when she discovered RediHeal. RediHeal was applied in accordance with package directions.

The Result:

Vast improvements were noticed after just a few days, as evidenced by the photos, above. The deep cavity that had been present resolved itself quickly, and the skin defect continued to improve each passing day. Says Bauer's owner, "The RediHeal was amazing – it really worked remarkably well and we have been telling every doctor about the product."
